Project Executable Files

Date	28 June 2026
Team ID	
Project Name	Rising Water
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA(no database used)
5	Environment configuration file (.env.example or similar)	NA (if not used)
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

📁 Project Structure

```
Rising_Waters/
|
├── Dataset/
├── Model/
├── Notebook/
├── static/
|   ├── css/
|   ├── images/
|   └── js/
├── templates/
├── app.py
├── requirements.txt
└── README.md
```

Step 3: Deployment / Access Details :

Hosted / Deployed URL	Hosted Link : https://rising-waters-19hr.onrender.com
Login Credentials (Demo)	Not Required (Public Application)
Platform / Hosting Provider	Render
Repository Link	Project Repo Link : https://github.com/Charan-Neeukattu/Rising_Waters
Demo Video Link	https://drive.google.com/file/d/14R5Tghi3YdqbV9Ceg5Wh82WjiIFg8sV9/view?usp=drivesdk

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Step 4: Run Instructions

Pre-requisites:

- Python 3.10 or later
- pip (Python Package Manager)
- Git (optional)
- Internet connection
- Visual Studio Code (recommended)

Step 1: Clone the repository

git clone <Repository_Link>
cd Rising-Waters

Step 2: Install the required dependencies

pip install -r requirements.txt

Step 3: Verify the project files

Ensure the following files are available:

- app.py
- floods.save
- transform.save
- requirements.txt
- templates/
- static/
- dataset.csv

Step 4: Run the Flask application

python app.py

Step 5: Open the application

Open the following URL in your web browser:

http://127.0.0.1:5000

Step 6: Test the application

- Enter the required weather values.
- Click **Predict Flood**.
- View the prediction result (Flood Chance / No Flood Chance).

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on quality of dataset	Can be improved using larger datasets
2	Works only with entered weather parameters	Future enhancement can integrate live weather APIs
3	No user authentication	Can be added in future versions
