### Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

### DFD Symbol Legend

| Symbol                                   | Name                   | Description                                                                                                                                                                                                                                       |
|------------------------------------------|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Oval / Rounded shape</b>              | <b>External Entity</b> | Represents an external user or system that sends or receives data. <b>Example:</b> User / Disaster Management Officer, Machine Learning Model.                                                                                                    |
| <b>Rectangle with numbered header</b>    | <b>Process</b>         | Represents a process that transforms input weather data into prediction results. <b>Example:</b> Weather Data Input, Data Pre-processing, Flood Prediction, Display Prediction Result.                                                            |
| <b>Rectangle (solid fill, no number)</b> | <b>Data Store</b>      | Stores data for later use. <b>Example:</b> Weather Dataset, Prediction Results.                                                                                                                                                                   |
| <b>Labeled arrow</b>                     | <b>Data Flow</b>       | Shows the movement of data between entities, processes, and data stores. <b>Example:</b> Weather Parameters, Weather Data, Processed Features, Historical Weather Data, Trained ML Model, Prediction Output, Flood Prediction, Flood Risk Report. |

## Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.
